## HOW IT WORKS

We begin by engaging key stakeholders to align on business drivers, security requirements, compliance needs, and budget expectations. Using a combination of discovery workshops, technical assessments, and data-driven analysis, NexusTek evaluates:

- **Current Infrastructure:** Servers, storage, networking, and interdependencies
- **Application Portfolio:** Business criticality, architecture, and migration readiness
- **Security & Compliance Posture:** IAM (Identity and Access Management), data protection, and regulatory alignment
- **Operational Maturity:** People, process, and governance readiness for AWS cloud operations
- **Financial Modeling:** AWS cost projections using AWS Pricing Calculator and Total Cost of Ownership (TCO) Tools

Our work results in a comprehensive AWS Cloud Readiness Report that includes:

- Executive Summary of business and technical findings
- Detailed inventory of workloads, applications, and dependencies
- Cloud suitability and migration readiness scoring
- Security, governance, and compliance gap analysis
- Right-sizing and AWS cost modeling
- Prioritized roadmap for AWS cloud adoption or optimization

NexusTek's AWS Cloud Readiness Assessment is ideal for organizations seeking clarity on where to start with AWS, how to proceed, and what their next steps will cost—enabling informed decision-making and risk-managed execution.
