

Is Your IT-Related Risk Beyond Acceptable Limits?

Is your business facing IT risks like cybersecurity threats, compliance gaps, or operational disruptions?

Keeping IT-related risks in check is crucial to protecting your business from potential security breaches, data loss, and compliance violations. Unmanaged risks can lead to costly downtime, reputational damage, and legal consequences. By proactively addressing these vulnerabilities, you safeguard your operations, maintain customer trust, and ensure long-term business continuity.

Assessing IT Risks

How vulnerable is your business?

IT risks can range from data breaches and compliance failures to operational downtime. With proactive measures, businesses can avoid potential financial loss, damage to reputation, and legal consequences.

Phishing, ransomware, and malware attacks.

Failing to meet standards like GDPR, HIPAA, or PCI-DSS.

Loss of critical business data due to human error or system failure.

Downtime caused by IT infrastructure issues.

\$1M

Cost of a single hour of infrastructure downtime for enterprises

9.6 Days

Average downtime after a ransomware attack

Of major outages in the past three years due to ignored procedures

Frequent security breaches or near misses.

Growing complexity in managing compliance.

Lack of visibility into your IT infrastructure.

High reliance on outdated technologies.

Signs Your IT Risk is Unacceptable

Recognizing signs of unacceptable IT risk is vital to prevent disruptions, financial losses, and reputational damage. Early detection allows businesses to address issues before they escalate, ensuring security and minimizing costly consequences.

Mitigating IT Risk with NexusTek
